This information is required for the best customer experience. Prior to install, our Software team will contact the end user and thoroughly train them on our LED Cloud software.**

## Pre-Installation and Installation Requirements

Please consult Installation Manual for complete details and requirements.

### The Basics

Is this a new sign or a retrofit? New \_\_\_\_\_ Retrofit \_\_\_\_\_

How will the sign connect to the internet?

Engenius WiFi (supplied) \_\_\_\_\_ Ethernet Direct \_\_\_\_\_ Broadband \_\_\_\_\_

Cirrus does not offer Broadband/4g options at this time.

Is there direct line of sight and no obstructions from the Wifi transmitter to the the sign?

Yes \_\_\_\_\_ No \_\_\_\_\_

Obstructions that interfere with direct line of sight between the sign and WiFi transmitter may cause a connectivity issue and an unreliable internet connection. Cirrus cannot be responsible for site conditions that affect internet connectivity.

Type of mounting? Monument \_\_\_\_\_ Pole \_\_\_\_\_ Pylon \_\_\_\_\_ Wall \_\_\_\_\_ Other \_\_\_\_\_

Distance from the building to the sign \_\_\_\_\_ ft

Master Controller mounting location \_\_\_\_\_

The Master Controller for all Cirrus Displays is completely weatherproof and can be located inside or outside of the sign. Avoid placing the controller in direct sunlight. The Master Controller comes with 10' of cable going to each side of your display. Additional 10' cables are available to extend the maximum length the controller can be located away from the display to 20'. Please determine the length of cable needed before install.

### Electrical Requirements

Does the display require a new electrical line to be run? Yes \_\_\_\_\_ No \_\_\_\_\_

What is the primary line voltage? 110v \_\_\_\_\_ 120v \_\_\_\_\_ 208v \_\_\_\_\_ 220V \_\_\_\_\_ 240v \_\_\_\_\_

Breaker Rating \_\_\_\_\_ amps (Do not load breaker more than 80% of maximum to insure proper performance)

Consult Installation Manual to calculate proper electrical requirements.

As fluctuations in electrical current can cause performance issues, It is the responsibility of the sign installer to insure proper electrical requirements and site conditions are met. The use of surge protectors, electrical line conditioners and step-up/step-down transformers may be required for the display to operate correctly. Cirrus is not responsible for improper electrical service and warranty coverage may be denied if caused by unsuitable electrical conditions.

### Internet Requirements

Are there any network restrictions (bandwidth limitations, firewalls, content filters, etc.) that could affect connectivity? Yes \_\_\_\_\_ No \_\_\_\_\_

**Please note:** If network security prevents internet access, a **Static IP Address** may need to be programmed into the controller **BEFORE THE SIGN IS INSTALLED**. Contact Cirrus for details.

**\*\*If you are not responsible to set up the network:** \_\_\_\_\_

Please provide your buyer's information. Cirrus will contact them directly to make sure that we have a complete understanding of the network requirements.

### Software Training

Approximately 2 weeks prior to installation, Cirrus will contact the end user to provide software training. Please provide Cirrus with the end users contact information to schedule training. Training must be scheduled in advance and will not be provided at the time of install unless pre- arranged.

**\*\*\*Your installation is not complete until the display is powered on, connected to an active internet connection, and you have spoken with a Cirrus Representative while still onsite.\*\***

**CIRRUS**  
LED SYSTEMS

To Activate display Please call 877-636-2331 x 2 to speak with a Cirrus Representative before leaving the job site.

**By signing, buyer acknowledges having read and reviewed this important information for a successful install!**
